## Abstract of WO 02055051 (A1)

The invention concerns a cosmetic composition comprising an aqueous phase, said aqueous phase including at least a compound with optical property selected in particular among fillers, pigments, mother-of-pearls, tightening agents, matting agents and their mixtures, and a polymer including water-soluble units and units having in water a lower critical solution temperature LCST, the solution temperature by heating in aqueous solution of said units at LCST ranging between 5 and 40 DEG C for a mass concentration in water of 1 to 25 % of said units. The invention also concerns the use of said polymers to suppress or reduce the surface bonding power and maintain the stability of a film obtained from a composition with optical property containing them.; The inventive compositions with optical property can be in the form of emulsions or dispersions and are compositions essentially for topical use and in particular cosmetic or pharmaceutical.
